

IMPACTIVA RAW HIDE / SKIN QUALITY ASSURANCE PROGRAM

FROM LEAD-TIME DISRUPTIONS TO LOST SALES, POOR QUALITY RAW HIDES / SKINS CAN HAVE SERIOUS FINANCIAL CONSEQUENCES

Poor quality destroys profits. Customer dissatisfaction, delays, reprocessing and tannery-slaughterhouse disputes: all can dramatically reduce margins. You have a lot at stake, so why put your company and your customers at risk with inadequate raw hide / skin quality control? At Impactiva, we focus on providing raw hide / skin quality assurance Right from the start™. Our raw hide technicians will perform a rigorous quality control at your slaughterhouses, yielding a Lean raw material supply chain that cuts costs and saves time.

WHY IS IMPACTIVA DIFFERENT?

DEPENDABLE OVERSIGHT OF YOUR RAW HIDE / SKIN SUPPLY CHAIN

Our highly trained leather technicians will work side-by-side with tannery personnel to inspect 100% of raw hides / skins, ensuring that slaughterhouse shipments match your exact requirements, grading specifications and defect standards. Their consistent, corruption-free quality control will yield significant savings, eliminating tannery-slaughterhouse disputes while avoiding costly disruptions caused by bad raw hides / skins arriving at your tanneries.

VALUABLE INSIGHT TO IMPROVE YOUR BOTTOM LINE

In addition to providing detailed monthly reports of supplier performance, we'll work with you to quickly remedy any raw hide / skin quality problems. We'll use root cause analysis to understand why the problem occurred, then modify slaughterhouse, customer, or Impactiva processes or procedures to avoid reoccurrence. The result: better, more consistent quality with fewer delays, reprocessing and cancelled orders.

PROVEN, COST-SAVING PROCESSES

Our technicians will perform 100% inspection of each hide / skin separating it by weight and grade with each completed pallet being given a waterproof identification label. After only 120 days of Impactiva-controlled deliveries, your tannery personnel will have the confidence to release shipments directly to the beam house after performing only a small, low-cost sampling of a few pallets.
